Full-stack developer with extensive experience in building modern and high-quality web applications using React and Laravel. Open to freelance, contract, and full-time roles, including remote positions across different time zones.

WORK EXPERIENCE

Web Developer (Frontend Focused)

September 2022 - January 2025

Pilot Multimedia, Kuala Lumpur, Malaysia

Led frontend development on a small team, migrating a legacy credit scoring application from a desktop client to a React-based web platform for a banking client:

- Migrated the application's core calculations and functionality to React, working from business and process documentation, and integrated RESTful APIs to connect with backend services.
- Optimized frontend performance by reducing redundant API calls, adding caching, and eliminating unnecessary re-renders.
- Maintained code quality through regular debugging, code reviews, and refactoring, with unit tests written in Jest to catch issues early.
- Implemented encryption and password hashing for the authentication flow to meet banking security standards, and coordinated with the business team on timelines to keep delivery on scope and budget.

Web Developer (Backend)

January 2022 - August 2022

HomeCrowd, Kuala Lumpur, Malaysia

Contributed to backend development for a Home Loan Application platform built with Laravel, including database optimization and AWS deployment

- Built backend features for a Home Loan Application platform using Laravel, including routes, authentication logic, and caching for frequently accessed endpoints.
- Optimized backend performance by caching frequently accessed data and reducing redundant database queries on the loan dashboard.
- Deployed and maintained the application on AWS, using EC2 for hosting and S3 for document storage.
- Worked on bug fixes and smaller features across the loan application flow, while getting up to speed with Laravel conventions and the existing codebase.

EDUCATION

INTI International University, Nilai, Malaysia

Master Of Science in Data Science

- Thesis research focused on detecting early indicators of mental health conditions through social media behavioral data, applying data mining and machine learning techniques.

UCSI University, Kuala Lumpur, Malaysia

Bachelor of Science (Hons) in Computing

- Final-year project: Designed and implemented an AI facial recognition system using Python and OpenCV.
- Co-authored a paper presented at the 6th International Conference on Trends in Electronics and Informatics (ICOEI 2022), published on IEEE Xplore.

SKILLS & OTHER

Frontend: React JS, Vue JS, Tailwind CSS
Backend: Node JS, Express JS, Laravel
Programming Languages: JavaScript, TypeScript, PHP, Python, Java
Cloud & Infra AWS (EC2, S3), Git, GitHub, GitLab, Hostinger
Tools: Jira, Figma, Jest
Databases: MySQL, MongoDB

Languages

Arabic: Native **English:** Fluent **Malay:** Basic
